# Important Introduction – Read First

First of all, congratulations on your choice to download this eBook.

I have spent the better part of my life researching natural enlargement techniques, partly because I was once 'small' myself.

I completely understand what it feels like to be frustrated with your penis size. The fact is there are many men, that are far below the 'average' 6" size (when erect), and that's part of what prompted me to develop the PE Bible program.

This guide you are about to read is going to help you a lot, but it's not the whole story. You have to look at enlargement as complete eco-system, it's not just one element that's going to get you where you want to be, but a combination of multiple elements that will really kick growth into overdrive.

By doing some penis enlargement exercises, you can train your penis to let more blood into it which will give you a harder erection and assist in penis growth if you follow the other necessary steps to cause big growth. (This is what the other enlargement "gurus" didn't want you to know!)

There is no doubt in my mind that exercises alone will get you larger (anywhere from 0.5-1" in length), however if you really want to see explosive growth, in a much shorter time, with much less effort you'll want to combine the recommended exercises with the biological component of my PE Bible system.

You see, in the same way that your body does, your penis needs nutrients and biochemicals to repair itself and - more importantly for us - to grow. What's more, you can trick your body into restarting puberty style penis enlargement (i.e. natural growth) with biochemicals that were present in your body during puberty, but left when it ended! When they left your body, penis growth ground to a sudden halt.

A cool video all about biochemicals and their function in penis enlargement can be found at [PEBible.com](http://PEBible.com).

I've done the math, and the men who implement both the exercise regimen described herein, and the biochemical program, which involves low cost, over the counter natural supplements and a few easy dietary changes, see 2-3X the growth results as men who just do the exercises.

By downloading this guide, I know you are serious about REAL enlargement. So I want to extend a 51% discount to you on the PE Bible. You can get instant access to the entire program and see 2-3X the growth (on average) in significantly less time.

If you want to stick it out with just the exercises, I completely understand. However they need to be done, accurately, as described, or else there is no point in doing them at all. That's why I have created a companion video series to this guide that actually shows 'hands on' how to perform these proven techniques. You can [learn more about the Enlargement Exercises Video Series here](#).

I'd bet that your wife or girlfriend has never said in your presence that a bigger penis feels much better during sex than a small penis. It's no surprise because she doesn't want to hurt your feelings.

You see, one of the top complaints from women about their sex life is their partner's small penis size. So what can you do now to make sure your penis causes compliments, not complaints?

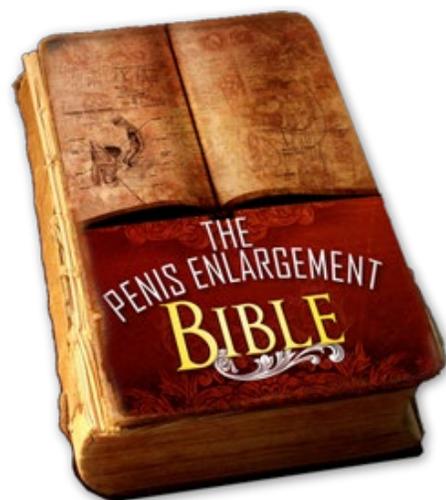

You've already raised your hand and taken the first step by downloading this guide. So stick with me, and study this guide like your life depends on it. Put the recommended exercises to use, and when you are really ready to get a big boost in size, put the rest of the PE Bible system to work for you by [getting your own copy here](#).

Now, let's get started!

## *John Collins*

# Know Your Penis

I'm not going to waste this space (and your valuable time) by telling you all about your penis. You know what a penis is already, right?! :)

But there is some important stuff that you need to know if you want to make your penis bigger...

As you know, the penis is **not** a muscle. It's also **not** a bone. Instead, it's made up of delicate spongy tissue which grew because biochemicals in your body made it bigger as you went through puberty.

The most important thing you've got to remember is that the penis isn't a muscle that can be exercised in the conventional way.

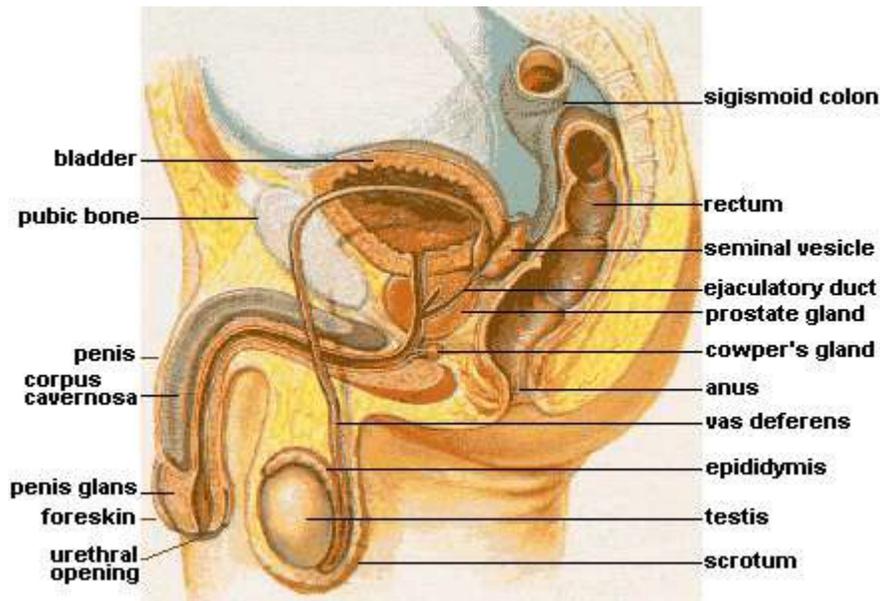

BUT...

You can use exercises to *accelerate* penis growth. And this free guide is all about those exercises which are most effective at accelerating the growth of your penis.

Unlike muscle, your penis consists of three cylinders or tubes of tissue. These are arranged with two cylinders on top (as you look down on the penis) and one on the bottom. They are each roughly the size and shape of a pencil. Running through the bottom cylinder is the urethra, the tube through which urine and sperm pass.

These cylinders of tissue are firmly held together by a wrap of tissue called Buck's fascia. If you want to make your penis bigger then you have to enlarge these 3 cylinders and the Buck's fascia.

Here's a diagram of the male sexual organs:

Our objective is to make the shaft of your penis bigger in length and girth from the base all the way to the tip. When we do that you get a bigger penis.

Penis exercises, unlike muscle exercises, are focused on trapping blood in the penis for longer than is natural. When I implemented my method of penis growth, this accelerated results and took me from a lowly 5" to a big 8".

This guide is focused on getting you gains that are between 2 and 4 inches personally.

Before we look at the exercises themselves let's talk about measuring your penis...

# Measuring Your Penis

The truth is, the majority of men have no idea how to measure penis length accurately. To accurately measure your penis is vital if you want to record the increases in size.

Here are the steps to measure your penis size accurately so you can give yourself an honest measurement about how you jack up to the male average of six inches...

FIRST.... find a measuring device. A cloth measuring tape works best. IF you can't find one - then a piece of string will do. After measuring yourself with a piece of string you can place that string along a wooden ruler or some other measuring device! (I hope that makes sense)

IF your penis 'curves' or 'bends' [and many penises do!!] be sure to measure along the curve or bend. Don't measure STRAIGHT from your pubic bone to the tip of your penis - in other words!

Now the fun part...

### **GET ERECT!**

Take your measuring device and measure your penis from your pubic bone (the 'pubic bone' is the bone you feel when you press in the area that is covered by your pubic hairs).

Don't press TOO hard - but hard enough to be firmly against that bone. Now hold your penis - if you have to! - and place the measuring device (whatever it is that you're using) along the top of your penis. (That's the part of your penis that YOU see!)

You are measuring from the pubic bone along the TOP of the penis to the tip of your penis. THAT measurement [whether in inches, centimeters or millimeters] is your OFFICIAL length.

The reason I suggest measuring FROM the pubic bone is because it puts every guy on a level playing field. It's a way of being more accurate. Some heavier guys have extra fat behind their pubic hairs - making the penis APPEAR smaller. But we're going for the scientific method to measure your actual size.

If you are using a piece of string or whatever, find the distance from your pubic bone to the tip of your penis and then measure the piece of string.

To measure the thickness or 'girth' of your penis - stay erect and find the thickest part of your penis (along the shaft). Take your measuring device and wrap it around your penis to get your actual girth measurement.

Take note of how many inches, centimeters or millimeters it takes to go all the way around. That measurement will be the official girth of your penis.

That's it. That's all there is to it. Now, onto the basics of exercises...

# Penis Exercises: The Basics

Penis exercises are a way of trapping blood in the penis. While some people sell systems on penis exercises this guide is free. And it's free because I'm not going to lie to you about penis exercises. I'm not here to make a quick buck. I was once where you are – trying to get a bigger penis – and I was scammed countless times.

Here is what “gurus” who rip you off with exercise programs will tell you:

- “Penis exercises are a great way to make your penis bigger. They're all you need to grow by 2-6 inches!!!”

- “Buy my stuff!!!”
- “Exercises work because they enlarge the blood vessels in the penis and then your penis can accommodate more blood. That means you get a bigger penis!!!”

I have to tell you right now though. That's total BS! What you need is the two-step biochemical method to penis enlargement. *One* of these steps is exercises.

So here's what you need to know about exercises. This is basic exercises, advanced exercises and finally a schedule for when to do what.

Here's what you need to know...

Some men, all too eager to see gains, have gone straight in at the deep end and done harm to their penis by not following the routine structure. Please be careful!

## **Warming up**

Just like any sports, warming up is very important to make sure that you protect your penis from any undue damage. If you fail to warm up properly then you're really putting a penis risk. I'll say it again, warming up is vital!

First of all, you need to prepare your penis. Soak a washcloth in warm or hot water, then squeeze it out. Take the warm cloth and wrap it around the shaft of your penis (either flaccid or erect). Hold it right there for a minute, remove it, repeat at least twice. Next is to dry off your penis well. Many people have come up with different ways of warming up but I find the simplest to be dunking a towel in hot, but not boiling, water and wrapping it around your penis. The hotter the better – but please be careful not to burn yourself.

Before you begin your daily exercises, you have to start off with this procedure for at least 5 minutes. The hot compress is useful because it draws blood to the area of your penis, thereby escalating the blood flow and making the skin more elastic. Another advantage is that this also ensures a good grip for the exercises you will be carrying out.

## **Lubrication**

Lubrication is necessary for all of the techniques we recommend here. Using the right lubricant will help you avoid irritation to the sensitive skin of your love gear.

There are many types of lubricants are used around the world. Of course, the most popular types are water-based personal lubricants. The water-based lubricants are so simple and easy to clean up, but tend to dry out quicker while you are exercising your penis. Therefore you may need to add more lube as you progress through your workout. While the petroleum-based lubricants are fine to use but they seem to be thicker and harder to clean up.

Vaseline is the most popular of the petroleum-based lubricants, but we believe that VigRX oil works the best. This oil has been specially formulated to boost male enhancement.

Now you are going to learn is standard stretching and standard Jelqing.

## Stretching

Standard stretching involves stretching penis so that the ligaments get longer under penis therefore gains length. The purpose of this method is to create tension in the erectile tissues by stretching the skin of the penis while in an erect state.

Not only does this make the skin of your penis slightly elastic, it also expands the amount of the space in your penis chambers, the corpora cavernosa. The higher the amount of blood that can fill these spaces results in an enlarging of the overall mass of your penis.

Stretching is so simple that you need to do is stretch the penis to make it longer. This involves gripping the penis just below the head and stretching it out with force to the ligaments gain size. There are six stretches.

- Stretch one: While sitting on the edge of a sofa or bed, begin stroking your penis using your thumb and forefinger (the same "a-ok" symbol used in our other methods).

Pulling the penis directly in front of you. You put the penis out directly in front of you from 30 to 40 seconds. As you stroke the penis from the base toward the head, maintain a firm grip and stretch the skin as best as you can.

- Stretch two: you put the penis directly down for 30 to 40 seconds.
- Stretch three: people the penis directly up for 30 to 40 seconds.
- Stretch four: you pull the penis directly to the left for 30 to 40 seconds.
- Stretch five: you pull the penis directly to the right for 30 to 40 seconds.
- Stretch six: you rotate the penis all the way in a circular movement for 30 to 40 seconds.

Repeat each direction 2-3 times. With these six stretches all you have to do is four sets of each everyday. Only do this after you have warmed up correctly.

After you've finished the exercise you can release the grip on the base of your penis. You should feel the blood begin flowing again. Go ahead, you may ejaculate at this point if you feel the urge.

Remember to use a firm grip and enough lubrication, always exercise caution! Do not grip your penis too tight so that you lose the circulation. If you are in pain or feel any discomfort, then you are doing the technique in the wrong way. Read the instructions again and retry the technique slowly.

## **Jelqing**

Stretching exercises are useful for lengthening your penis. But in order for one man to increase the circumference, you have to perform stretching exercise while your penis is in a partially-erect state. Jelqing is the technique that develops the whole penis so that its length, thickness, weight, and density all become proportionately enlarged.

Jelqing (also called "milking") is actually one of those ancient practices that has been performed for centuries by various tribes and cultures around the world. It's considered the most successful method of enlarging the penis. These "milking" exercises could force the blood into your penis. Over the course of several months, the blood spaces in the penis will gain volume. In other words; they can hold more blood.

As a result, your penis gets larger.

Jelqing is slightly different from stretching. Standards Jelqing involves forcing blood through the shaft of the penis by using your hand to trap it so that the blood vessels expand.

The standards jelq, the one that you'll be using for the first number of weeks, requires that you make a shape with your thumb and forefinger. To make this easier to explain simply make an okay symbol with your hand. The 'O' that you create through doing this will form the basis of your jelq.

The Standards jelq involves gripping the penis at the very base, squeezing tightly, and milking penis as you would a cow so that blood is forced to the tip. Standard jelqs should each last 3 seconds from the base to the tip.

1. Apply your lubricant all over the skin of your penis. Keep your lubricant close by since you will want it to last for as long as you need it. Don't use the soap because it tends to dry the skin.
2. With your thumb and forefinger, squeeze the base of the penis shaft. Pull downward. Stop at the head. Repeat, alternating hands. Each stroke should last about three seconds. The stimulation will certainly help you reach an erection.
3. When your penis becomes semi-erect (not fully-erect), make the "A-OK" sign with the thumb and forefinger of your left hand. With this hand, grip tightly around the base of your penis.
4. Now starting from the base, pull the penis gently yet firm. Stretch downward and outward. You have to maintain your semi-erect penis at this point. Make certain to start from the base the head with each stroke. Note that the head of your penis will get bigger with blood.
5. Switch to your right hand and repeat the stroke, starting from the base and stretching downward to the head. Alternate both hands in a smooth rhythmic ("milking") movement, touching upon every part of the penis except the very top part of the penis head. This is the very foundation of jelqing.

Don't forget that jelqing exercises are not performed during fully-hard erection. Make sure that your penis is between half to 3/4 erect. Results cannot be obtained until a partial erection is present. After this exercise has been done for quite some time, you will notice that your penis appears both longer and thicker.

This is a fact.

And we can assure you that from within one to several months of routine exercise, your penis will emerge quite huge; this is due to the impaction of blood in the penile tissues.

Carefully choose ONE of these jelqing exercise techniques that you feel comfortable with to include in your daily routine.

## PC Muscle Workout

What nearly everyone doesn't know is that the pubococcygeus muscle (pyoo-bo-cocksee-gee-us) or PC muscle plays a critical role in the functioning of the penis.

The pubococcygeus muscle is actually a group of muscles that run from the pubic bone to the tailbone. The PC muscle is the muscle you bring into play to stop the flow of urine from the bladder. It is also the muscle that contracts whenever you ejaculate, moving the semen up through the penis and out of the body. The PC muscle is a busy little muscle, you know? But as far as most men are concerned, it is still grossly unknown.

Mastering the techniques of male multiple orgasms is easy once you know how to train your pubococcygeus muscle.

When you urinate and you want to get the last drop out, you use your PC muscle in the opposite direction. By doing this you'll feel your anus open and the feeling will be somewhat different.

Most men can do Kegels anywhere, since they're seldom aroused by the exercises. Continued over a lifetime, the exercises can help men and women avoid urinary incontinence as they age. That, plus greater arousal, enhanced orgasms and longer-lasting sex, make Kegels one of the simplest, most beneficial exercises a man or woman can do throughout their lifetime.

Be careful though. Using your PC muscle can have negative effects. If you produce too much testosterone then you will find that you ejaculate prematurely. However if you follow our guidelines you will actually enhance your ejaculation control.

The basics of the PC muscle work out involve you clenching your muscle as hard as you can for a certain amount of time. To find the muscle in question all you have to do is stop the flow of urine when you are in the toilet. In the e-mails that we send you we will give you an exact routine every week.

**Struggling to understand how to perform the exercises properly? View 'hands on' video demonstrations of 31+ enlargement exercises, [click here](#).**

# Penis Exercises: Stepping It Up With Advanced Exercises

These next exercises are more advanced. You will use these as your penis becomes more used to being exercised in this way. They introduce more strain to the penis. If you were to use more advanced exercises immediately then you would do far more damage than good. The stretches and jelqs are slightly more complex.

You will not be using these exercises for a number of weeks. You will be e-mailed exactly what you should be doing that week, and these exercises will make up a part of your later routines.

## Advanced Stretching

Advanced stretching it's just different ways of forming stretching exercises. They stretch different parts of the penis.

## The Wrist Stretch

The wrist stretch is a way of applying pressure to the middle section of your penis mid-stretch. It stretches the ligaments more authority, but could also do more damage to your penis if your penis hasn't been trained by doing the simpler exercises first.

The Wrist Stretch involves gripping your penis just below the head, as with the standard stretch, and stretching penis directly in front of you, to the left, to the right, up and down. To add more pressure to this stretch, you take the wrist of your free hand and apply pressure to middle of your shaft as you stretch before force.

So, if you were stretching to the left, you would apply the wrist pressure on the left hand side of your shaft. If you were stretching up, you would apply wrist pressure to the other side of your shaft. If you stretching down, it would apply pressure to the bottom etc.

Please don't attempt the Wrist Stretch unless directed by one of our e-mails.

## The Big Seated Stretch

This is a very long stretch for those of you who have time and privacy. Each stretch takes 10 minutes to complete. By that I mean literally 10 minutes of nonstop stretching.

To perform the stretch, grip your penis while seated by raising one leg up and putting your hand underneath it then gripping just below the head. Then, pull with full force and hold for 10 minutes. For the next set, lift up your other leg and using your other hand repeat the process.

## **The Big Squeeze**

The Big Squeeze is placed in this section because it is more a stretch than a Jelq. This routine simply involves squeezing your penis by putting it on the table, and using the flattened palm of your hand, push down on the penis.

For this you push firmly by placing one hand on top of the other and using all your weight to squash the penis. You separate the penis into the upper and lower parts, and push down on each for 45 seconds

## **Advance Jelqing**

Advanced Jelqing is for those of you who want to see big girth and length gains. We've already seen standard Jelqing, but these advanced techniques will do much more to improve your size.

You will notice there are quite a lot of Jelqing exercises that you can do. After you have completed our program, you will be a pro, and then you can develop your own jelqs. However, by the end of our program you will probably have reached the size that you desire anyway -- so you can forget all about Jelqing!

Most Jelqing improves your length and girth. Stretching is reserved for length gains, but then length can also be obtained from Jelqing correctly. However, the main reason for using Jelqing is to improve your girth.

## **The Double-Handed Jelq**

### **Erection strength: 95%**

This is a variation of the standard jelq, the difference lies in using both of your hands instead of one. What you must do to start a standard jelq using your right hand, moving it up your shaft by about an inch, then with your other hand grip at the very base i.e. where your first hand started. Your left-hand is being used to trap the blood.

Now, with your right hand, jelq all the way up to just below the head of your penis. At this stage lots of blood will be trapped. Now, to gain length, finish your jelq with the first hand (your right hand) and slowly move your left hand up to just below the head. Then, take your right hand and gripped the very base again and continue this cycle.

Important things to remember: your penis must be, and remain 95% erect. Only ever do this exercise after you have warmed up properly.

This exercise is mainly for length gains, but by making a small variation you can turn it into a girth jelq. That is what we shall be looking at now...

### **The Double-Handed Girth Jelq**

**Erection strength: 95%**

This Jelqing exercise is designed solely for improving girth. Start as you did the previous exercise -- so that your hands are either end (one at base, one just below the head). The only difference with this exercise compared to the last one is that this is your starting point.

Now all you have to do, when there is lots of blood trapped in your penis, is to slowly push to hands together while maintaining a tight grip. What you will notice is that your shaft is being expanded as the blood is forced outwards.

This is held for 30-60 seconds.

Important things to remember: again, your penis must be, and remain, 95% erect. Only ever do this exercise after you have warmed up properly.

### **The Double-Handed Girth Bend**

**Erection strength: 95%**

This exercise is similar to the last. With one hand at either end of your shaft, literally bend the penis forwards slowly, ruling it so that the bend moves from top to the bottom. Do this for 30-45 seconds. Repeat the exercise but in reverse i.e. bend it the other way.

### **The Ultimate Girth Jelq**

**Erection strength: 95%**

Similar to the Double-Handed Girth Jelq, the object of this is to force your hands closer until they almost touch. The time spent on the movement from each end of your shaft to the center point should be 30-45 seconds.

You can concentrate on different parts of your penis shaft while doing this. If you want to see more gains at the base than simply don't move your base and. If you want to see more gains closer to the tip, then don't move your upper hand. You can mix up the exercise depending on whether your girth gains are level or different at different points of your penis.

Important things to remember: 95% erection. Ensure that you warm up.

### **Warming Down**

Each step of exercises should be ended with a gentle massage and a warming down session with the help of a hot towel. When you give a massage to your penis and apply some heat to it, it helps healing and rebuilding of the cell tissue.

You see, heat promotes faster growth of tissue cells and it restores the sensibility problems you may have had during your enlargement exercises. So after each exercise, you have to massage your penis softly for about 1 minute.

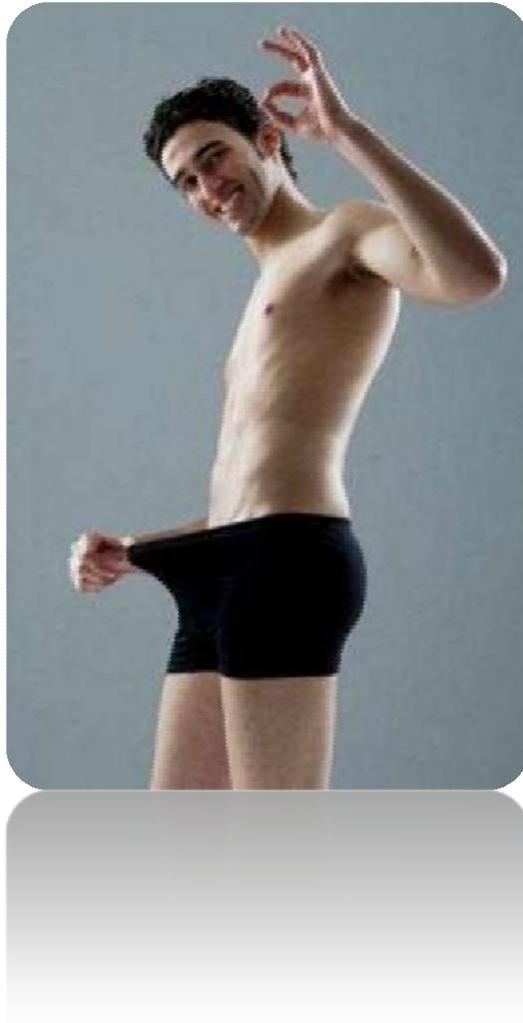

You should perform a soft and circular motion with your forefinger and middle finger along the base and the shaft of the penis. Be very gentle with your moves here since your penis has just been through some serious hard workout.

Following the massage session, you should apply another hot towel around your penis, just like you did for the warm up. This part of the practice is as essential as the first one because the heat will stimulate the damaged parts and will make them function well again.

**Struggling to understand how to perform the exercises properly? View 'hands on' video demonstrations of 31+ enlargement exercises, [click here](#).**

# Penis Exercises: The Schedule

This is the schedule that you can start today. Alone, it won't have any affect. Until you have assimilated all of the required nutrients and biochemicals into your body, you will just get improved erections and maybe a very small amount of growth. Usually it takes 10 weeks to see real gains, but you will notice a harder penis after a few weeks.

Biochemical growth will cause rapid growth – it's what worked for me when I finally - after years of trying – stumbled upon the secret to getting a bigger penis. But exercises increased the speed at which I gained by about 22% when those biochemicals were present. You can [get access to the full PE Bible system here](#) which describes the complete natural biochemical part of the program to get EXPLOSIVE growth.

Here is the exact exercise schedule that I used...

	Exercises
<p><b>Weeks 1-3</b></p>	<p>Time spent on exercises per day: 15-20 minutes.</p> <p>Gently massage your penis and surrounding area with a warm cloth. You want to loosen up your penis and the muscles around it. Do this for 2-3 minutes.</p> <p>Standard stretching is the only way to begin! For this hold each stretch (outwards, up, down, left, right and around) for 30 seconds. Your penis must be flaccid to do this or you will hurt yourself. Go through this cycle twice.</p> <p>Exercise you PC muscle in the process by flexing it in the manner similar to controlling your bladder flow. This technique helps you preclude premature ejaculation. After 20 minutes, give your penis a rest. Wrap a warm towel around your penis and then repeat the routine after a few minutes of sufficient rest.</p> <p>Now continue on to the standard jelq. Do this for 10 minutes, and then warm down.</p> <p>Perform these exercises 5 days a week. Give yourself the weekend (or any two days) off. You will notice that your erections become harder and you may see a little growth.</p> <p>In week 3 spend 10 minutes doing the Double-Handed Jelq as well.</p> <p>Exercises to use:</p> <p>Standard Stretching</p> <p>Standard Jelqing</p>
<p><b>Weeks 4-5</b></p>	<p>Time spent on exercises per day: 15-20 minutes.</p> <p>Exercises to use:</p> <p>Standard Stretching</p> <p>Take a seat with you back vertically straight and mare sure to lubricate you penis. With one hand, grab the base of your penis squeezing the</p>

penis shaft as you move towards the penile head. Once there, use your other hand and start anew.

Do the squeezing routine for 3-5 seconds as you moved from the penis base to the head. Repeat this action over a 5 minute period without attaining a full erection or ejaculation.

#### Standard Jelqing

Gently encircle your penis and moving your hand up to the head, concentrate of pushing the blood up the penis. On reaching the head of your penis, take your other hand to the base and perform the same motion with your other hand.

#### The Wrist Stretch

Grip your penis firmly just below the head and stretch it gently to the left, to the right, up and down. Repeat this technique for about 5 minutes.

#### The Big Squeeze

Place your penis on the table, squeeze and put pressure on your penis with your palm firmly. But don't be so hard on your penis. Keep repeating this for about 2 minutes.

### Weeks 6-8

At the end of this cycle you will have your body at its optimum. This is the last transitional stage. Because of that you shouldn't do everything yet.

However, you can split your exercises into morning and night. You should do more advanced, intensive jelqs and stretches as your penis starts to get ready for growth.

Spend between 20-30 minutes a day exercising. Now you can do everything but the Ultimate Girth Jelq and the Double-Handed Girth Bend.

If at this stage you have already begun to see growth then by all means do the others. You'll now know the feeling of a good workout so you will know which exercises you respond to best.

Also, mix up what you do. Keep your routines fresh for the best results.

## Week 8

Well done, my friend! You have been through a great experience towards enlarging your penis. Don't get too excited though because your first week is nothing.

But now you can create your own routine. You'll have noticed what you respond to best. Tailor-make your exercises and growth will happen. Spend at least 15 minutes a day on intense workouts.

Note: Before any exercise you have to warm up and afterwards you have to warm down.

# Conclusion

That's the basis of penis exercises! This is the complete 'hands on' part of the system that I discovered (almost by accident!) which caused my penis to get bigger by 3 inches in length and 2 in girth.

Why am I sharing this? I'm sharing this information because some really sneaky "gurus" are selling this information and making a profit out of it. That would be cool, and I'd be fine with it if it worked. But, here's the thing, it doesn't on its own!

I personally wasted hundreds, if not thousands of dollars on penis enlargement stuff. And ALL of it failed until I stumbled upon the solution that worked wonders for me. So, this free guide is here to stop you getting ripped off.

I am not a wealthy guy and at some points when I shelled out a fortune on these products I was really damn poor! So if I help one guy save a bit of money and get better educated then I think this guide is a good thing.

So how do natural size gains happen?

I've said exercises accelerate growth, and here's how my complete system worked for me. Please remember that I'm not an expert! I'm just a regular dude who found something that's worked incredibly well for me and the few people I shared this info with.

The way that my biochemical method works is by making your penis naturally grow. All you need to do is to restart the production of certain biochemicals in the body. These biochemicals were responsible for growth when you were going through puberty, and can be made to be produced in the body now, just like they were then. If you can do this then you will begin penis growth.

Most people don't know about this vital technique because the enlargement industry makes much more money selling very expensive methods which don't deliver results. However, getting your body ready to make your penis bigger is the only way (other than surgery) that you can cause real gains in your penis size. That is the reason why other products (as you probably have discovered) fail, because they ignore this highly important aspect of growth.

The way to make your penis bigger is by getting those biochemicals (which caused penis growth during puberty) back in the body. Then: BOOM! You will start to see gains.

I have actually put my entire system together in an easy to follow book called "The Penis Enlargement Bible". If you wanted to use an analogy, doing exercises alone is like putting out a house fire with a garden hose, you are going to get results, but they are going to be slow and tedious. The PE Bible is like opening up the Hoover Dam to let the water pour in, it could mean the difference between getting 0.5-1" of growth, compared to 2 or even 3" of growth.

I once struggled with a small penis, and the mental burden that comes with it (not to mention numerous failed sexual relationships), so I have dedicated the past 10 years of my life to getting my PE Bible system out to as many men in need as I possibly can.

Since you downloaded this eBook and got to the very end, I know that you have the motivation and discipline to put the full PE Bible system to work for you. **Which is why I want to go ahead and offer you a 51% discount off the regular price of the system. Plus, I'm giving you a 60-day money back guarantee.** If for any reason in the next 60 days you decide that my PE Bible isn't right for you, just e-mail me for a refund and one will be promptly provided.

All you need to do is click the button below to get instant access to the PE Bible members area, and you will be on your way to serious growth in no time at all...
